Features: This belt offers excellent gripping for the highest inclines (up to 45 degrees for some products). This is an old time favorite for many industrial applications. NOTE--The rough top impression must be recessed to use lacing. Use Recessed OAG for Lacing Recommendation. 2 Ply Steep Grade is used for some of the steepest inclines. The belt also prevents breakage due to the cushion effect of it's profile. It is very popular in the airline industry and bottling plants.
