7-8015: 1-1/2" Snowplow Blade

Color: Black

Nom. OAG: 1.5" +/- 0.03"

Top Surface: Smooth

Bottom Surface: Smooth

Compound: SBR

Weight: 0.79 lbs./PIW

Features:

7-8015 — 1-1/2" Snowplow Blade

7-8015 uses the same high-performance SBR formulation but in a heavier 1-1/2" thickness for increased durability and impact absorption. The 2400 PSI tensile strength and 600% elongation provide superior resistance to tearing and deformation under extreme plowing conditions.

The thicker profile offers enhanced wear life, improved shock absorption, and additional stiffness when clearing large accumulations of snow or when operating in environments with uneven pavement or gravel surfaces. The 1100 modulus and 60-durometer hardness maintain dependable scraping contact.

This 1-1/2" SBR plow blade is recommended for heavy-duty municipal fleets, industrial snow removal, and high-impact service applications. It is well-suited for equipment that encounters repeated impact, abrasive surfaces, and demanding operating cycles throughout the winter season.
